CONTOIL®
Fuel oil meters

Applications
- Flow measurement for mineral oils and heating or propellant fuels
- In burners, on board ships, land vehicles and fixed-position motors
- “Germanischer Lloyd” approval for use on board ships (option)

Features
- The complete range of products offering the best solutions for the measurement of oil consumption
- Flow display for the electronic totalizer
- Mounting on the pressure or suction side, with no straight inlets or outlets required
- Independent of viscosity and temperature
- High vibration resistance

Your benefits
- The reliable solution with everything from a single source
- Simplifying burner settings
- Highly flexible mounting with very low space requirements
- Accurate measurements
- Maximum safety in the shipbuilding and automobile industries

VD 4-411 e 05.2005

The right product for every application...

VZE 15 ... 50 range (Standard)

with multi-function display and remote transmission

Electronic display of
- total volume
- resettable volume
- flow rate in l/h in digitals and as bar diagram in % other operating data in the service level

Simple to operate

Normal commercial long-life battery, simple to change, data security

Option: Inductive INA pulser for control purposes

Housing with threaded or flanged connection

Main characteristic data:
- flow range 10 … 30,000 l/h
- temperature 70, 130 and 180° C
- nominal pressure PN 16 and PN 25 bar

Information in chapter 1 **Page 5**

VZO 4 ... 50 range (Classic)

total volume display and remote transmission

Total volume display on roller register

Option: Reed pulser RE or RV for remote totalisation

Option: Inductive IN pulser for control purposes

Housing with threaded or flanged connection

Main characteristic data:
- flow range 0.5 … 30,000 l/h
- temperature 60, 130 and 180° C
- nominal pressure PN 16, PN 25 and PN 40 bar

Information in chapter 2 **Page 8**

... product groups and selection criteria

VZEA/VZOA range

optimal solution for special applications as for:

- differential measurement (VZEA/VZOA 15...50)
- certification/custody transfer for commercial trasactions (VZOA 4 …50)
- engine testbenches (VZEA/VZOA 15…50)

VZEA
Electronic display of
- total volume
- resettable volume
- flow rate in l/h in digitals and as bar diagram in % other operating data in the service level

VZOA 4 and 8
- Volume display on roller register

VZOA 15...50
- Volume display on roller register

Option: Inductive pulser, INA or IN, for control purposes

Option: RV Reed pulser for remote totalisation, integrated into the roller register (VZOA)

Housing with threaded or flanged connection

Main characteristic data:
- flow range 10 … 30,000 l/h
- temperature 130 and 180° C
- nominal pressure PN 16 and PN 25 bar

with special pairing for minimum measurement variance.

Information in chapter 3 **Page 16**

If flowmeters are needed for hazardous areas, please contact your nearest sales office.

CONTOIL®, the world's most frequently-used oil consumption meter

Leading manufacturers of oil burners and operators of heating systems, ships or diesel engines rely on CONTOIL® fuel oil meters - and with good reasons.

The advantages of CONTOIL® fuel oil meters – your benefits

You can decide which of these many benefits are the most important for you:

- the optimal solution for every application
- simple burner setting with flow rate display (types VZE)
- simple consumption monitoring or manual dosing feature, with the resettable counter (types VZE)
- can be mounted on the pressure or suction side
- space-saving installation, because no straight inlet/outlet sections are needed
- the meter can be mounted flexibly in a horizontal, vertical or inclined position
- accurate measurement result, since the reading is independent of the temperature and viscosity of the fluid
- minimum failure costs due to simple function monitoring, rapid fault analysis and the possibility of simple repairs on site

Areas of use

- to measure heating fuel consumption by oil burners (for example, in heating boilers, industrial furnaces, tar processing plants)
- to measure propellant fuel consumption by motors and engines (such as diesel locomotives, construction machinery and ships, or in standby power groups, combined heating and power stations)
- consumption monitoring
- flow measurement for mineral oils, option with remote transmission
- manual dosing / filling
- flow measurement for machine and motor/engine oils
- engine testbenches

Medium

- heating fuel extra light / light, medium, heavy
- naphtha
- diesel
- petrol

  and other media which can be used for lubrication purposes

VZE 15...50 (Standard)

Technical data [1]

- with electronic display of total volume, resettable volume and flow rate, units: litres or US gallons [2]
- fuel oil meter with threaded or flanged connection
- for mounting in a horizontal, vertical or inclined position

Option: with inductive INA pulser

Versions available on request:
- different flange drillings, such as ANSI, JIS

Type			VZE 15	VZE 20	VZE 25	VZE 40	VZE 50

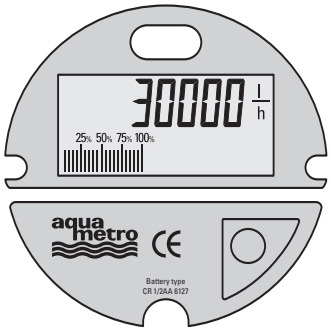
Weight with threaded ends [4]		approx. kg	2,2	2,5	4,2	17,3	–
with flanges PN 25		approx. kg	3,8	4,5	7,5	20,3	41,0
Pulse values of pulsers:		approx.					
INA inductive according to DIN 19234 [5]		l/pulse	0.0006	0.00185	0.005	0.017	0.060
Pulse frequency INA	at Q_{max}	Hz	277,778	225,225	166,667	147,059	138,889
	at Q_{min}	Hz	4,630	4,505	4,167	3,676	3,472

1) Manufacturer's specification, valid for the reference condition as specified under meter data (annex).
2) 1 US gallon corresponds to 3.785 litres.
3) For burners and engines or motors, the meter must basically be selected for permanent flow. For higher viscosity, or if the meter is installed on the suction side, the pressure drop and any reduction in the measuring range must also be considered; see Chapters 5 and 8.
4) Weight without couplings.
5) The precise pulse value can be taken from the meter; it is only known after the calibration. The next device must have an adjustable input.

Pressure drop curves

in chapter 5

Electronic display



66017.4a

Display values:	• total volume, resettable volume, flow rate • In the service level, service hours and other information can be read out
Display:	• 8-character LCD with identification of the parameter, height of numbers: 8 mm, flow rate (meter load) using bar diagram
Temperature:	• ambient temperature -10 … +70° C, storage temperature -20 … +80° C
Safety:	• CE, vibration and shock test to DIN IEC 68
Supply:	• usual commercial lithium battery, type CR 1/2AA or CR2
Data reception:	• by non-volatile memory (EEPROM)
Change of battery:	• after 5 years, based on a battery lifetime of 6 years with a maximum of 10 hours' digital display of the flow rate
Protection:	• IP54 (IEC 144) against splash water and dust

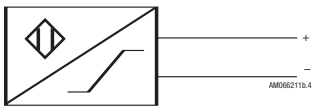
INA pulsers

High-resolution pulsers for industrial applications. Plug-in proximity switch.



Switching element:	• inductive slot initiator according to DIN 19234
Switching voltage:	• 5 … 15 VDC
Residual ripple:	• max. 5 %
Switching current:	• > 3 mA at 8 VDC / 1 kOhm
Static current:	• < 1 mA at 8 VDC / 1 kOhm
ON-time:	• 50 % ± 10 %
Ambient temperature:	• -10 … +70° C
Type of protection:	• IP 65 (IEC 144) against water jets and dust
Connection:	• Pulser supplied with special plug. Required cable min. 2 x 0.35 mm² and 4...6 mm external diameter or optional pn 80019 with mounted cable.
Option:	• Cable mounted, 2 x 0.5 mm², PVC black, length 3 m (pn 80019)

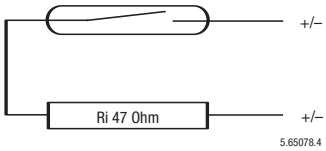
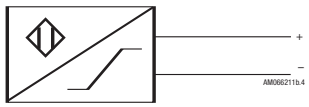
RV Pulsers



This pulser is integrated into the roller counter and is thus especially appropriate for remote totalisation. For other applications the use of the inductive pulser IN is preferable.

Switching element:	• Reed switch with dry contact (inert gas)
Switching voltage:	• max. 48 V AC/DC
Switching current:	• max. 50 mA (Ri = 47 Ohm/0,5 W)
Static current:	• Open Contact
Switching power:	• max. 2 W
ON-time:	• 50 % ± 10 %
Temperature:	• Ambient -10 … +70° C
Protection:	• IP 65 (IEC 144) against water-jets and dust
Connection:	• Cast-in cable, length 3 m
Cable cross section:	• 2 × 0,14 mm^2

IN Pulsers



Pulser for industrial applications. Supplied with plug-in pulser sensor.

Switching element:	• Slot initiator according to DIN 19234
Switching voltage:	• 5 … 15 V DC
Residual ripple:	• max. 5 %
Switching current:	• > 3 mA bei 8 V DC / 1 kOhm
Static current:	• < 1 mA bei 8 V DC / 1 kOhm
ON-time:	• 50 % ± 10 %
Temperature:	• Ambient –10 … +70° C
Protection:	• IP 65 (IEC 144) against water-jets and dust
Connection:	• Pulser supplied with special plug. Required cable min. 2 x 0.35 mm^2 and 4...6 mm external diameter or optional pn 80019 with mounted cable.
Option:	• Cable mounted, 2 x 0.5 mm^2, PVC black, length 3 m (pn 80019)

DN 15 only when the plant has a dirt trap with a max. 0.1 mm mesh width.

Option / Accessory [1]

Cable	Mounted cable IN/INA	80019

VZEA/VZOA 15...50, products for special requirements / applications

For applications requiring an increased accuracy of ± 0,5 % or better, as i.e.:
- Measurement of heating fuel EL or diesel in testing facilities
- Differential measurement
- Custody transfer with legal verification, when the counters are legally required to have design approval or custody transfer.

These products require strainers with smaller mesh size.

Products for the differential measurement

For a differential measurement, the flow is measured in the supply and return pipes. The difference between the two measurements is regarded as the consumption.

To obtain optimal measurement results, you should only use VZEA or VZOA CONTOIL® fuel oil meters calibrated in pairs, which are co-ordinated precisely to the plant/system operating conditions. The flow rate occurring in each meter, the permissible pressure drop and the viscosity of the fluid must all be considered during the design phase. The load on the meter is obtained as follows: flow in supply section less consumption = flow in return section.

When the order is placed, the following information is required:

• application	e.g. differential measurement for diesel engines in a standby power group
• fluid	e.g. diesel fuel
• temperature	e.g. 15 … 40° C
• operating pressure	e.g. 4 bar
• flow rate in supply section	e.g. fixed pumping rate 200 l/h
• flow rate in return section	e.g. 120 … 190 l/h (for a consumption of10 … 80 l/h)

The meters are marked “supply” and “return” during calibration and final testing in the factory. They must then be installed in the correct pipes.

For further information on the subject of differential measurement, please see Chapter 8, System Planning and Chapter 9, Application Examples.

Versions with design approval or custody transfer

CONTOIL® fuel oil meters are used almost exclusively for the measurement of the consumption of fuel oil. The metrological standards (such as the MID or EC guideline 71/319/EEC) are, however, regulate the requirements for counters and systems used for commercial transactions as well as the procedures for design approval and custody transfer. Measuring sites where a fluid is sold are regarded as transfer points that require custody transfer. These include petrol pumps at petrol stations, measuring devices for road tankers and measuring stations for loading and unloading all types of road vehicles. As a rule, a metering system on site must be in standby power mode and be checked and sealed by the local office responsible for custody transfer.

Typical for these applications is the narrow operating range with regard to the product, flowrate and temperature. CONTOIL® fuel oil meters are also available within the metrological for design approval or custody transfer. The differences in products relate only to the design or specifications of the counter and not to the quality of the product.

Technical data [1]

- Product versions for optimal results from differential measurement or for custod transfer (option)
- VZEA with electronic display of total volume, resettable volume, and flow rate, units: litres or US gallons [2]
- VZOA with display of total volume on roller register, units: litres. Optional versions with display in US gallons
- VZEA option: with inductive INA pulser
- VZOA option: with reed or inductive pulser, RV or IN
- with threaded or flanged connection
- for mounting in horizontal, vertical or inclined positions

Versions available on request:

- different flange drillings, such as ANSI, JIS

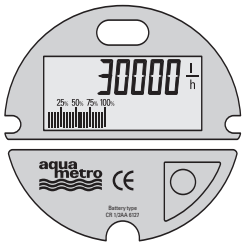
Two items are required when ordering: the VZOA counter and EU custody transfer, Article No. 96026.

1) Manufacturer's specification, valid for the reference condition as specified under meter data (annex).
3) For burners and engines or motors, the meter must basically be selected for permanent flow. For higher viscosity, or if the meter is installed on the suction side, the pressure drop and any reduction in the measuring range must also be considered; see Chapters 5 and 8.
4) Weight without couplings.
5) The precise pulse value can be taken from the meter; it is only known after the calibration. The next device must have an adjustable input.

Electronic Display VZEA



66017.4a

Display values:	• total volume, resettable volume, flow rate • In the service level, service hours and other information can be read out
Display:	• 8-character LCD with identification of the parameter, height of numbers: 8 mm, flow rate (meter load) using bar diagram
Temperature:	• ambient temperature -10 … +70° C, storage temperature -20 … +80° C
Safety:	• CE, vibration and shock test to DIN IEC 68
Supply:	• usual commercial lithium battery, type CR 1/2AA or CR2
Data reception:	• by non-volatile memory (EEPROM)
Change of battery:	• after 5 years, based on a battery lifetime of 6 years with a maximum of 10 hours' digital display of the flow rate
Protection:	• IP54 (IEC 144) against splash water and dust

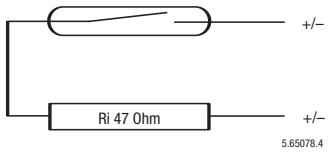
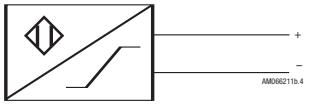
RV Pulsers



This pulser is integrated into the roller counter and is thus especially appropriate for remote totalisation. For other applications the use of the inductive pulser IN is preferable.

Switching element:	• Reed switch with dry contact (inert gas)
Switching voltage:	• max. 48 V AC/DC
Switching current:	• max. 50 mA (Ri = 47 Ohm/0,5 W)
Static current:	• Open Contact
Switching power:	• max. 2 W
ON-time:	• 50 % ± 10 %
Temperature:	• Ambient -10 … +70° C
Protection:	• IP 65 (IEC 144) against water-jets and dust
Connection:	• Cast-in cable, length 3 m
Cable cross section:	• 2 × 0,14 mm^2

IN/INA Pulsers

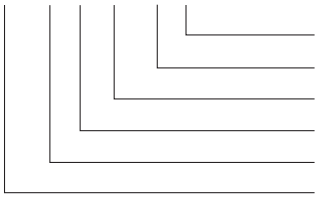


Pulser for industrial applications. Supplied with plug-in pulser sensor.

Switching element:	• Slot initiator according to DIN 19234
Switching voltage:	• 5 … 15 V DC
Residual ripple:	• max. 5 %
Switching current:	• > 3 mA bei 8 V DC / 1 kOhm
Static current:	• < 1 mA bei 8 V DC / 1 kOhm
ON-time:	• 50 % ± 10 %
Temperature:	• Ambient –10 … +70° C
Protection:	• IP 65 (IEC 144) against water-jets and dust
Connection:	• Pulser supplied with special plug. Required cable min. 2 x 0.35 mm2 and 4...6 mm external diameter or optional pn 80019 with mounted cable.
Option:	• Cable mounted, 2 x 0.5 mm2, PVC black, length 3 m (pn 80019)

Type designation key

VZOA 25 FL 130/25-IN



Information required to process orders

When the order is placed, information is required on the plant operating conditions (as stated at the beginning of this chapter). Please note that for custody transfer (commercial transactions) VZOA type meters have to be used.

Example for differential measurement:

Application:		Differential measurement diesel, supply 200 l/h, return 120. … 190 l/h
2 Pieces	Order No. 92290	CONTOIL® fuel oil meter, type VZOA 20 RC 130/16
2 Pieces	Order No. 96112	Modification for differential measurement

Example for custody transfer:

Application:		Custody transfer in Germany, heating fuel extra light, flow rate 200...400 l/h, temperature approximately 20 °C
1 Piece	Order No. 92290	CONTOIL®, fuel oil meter, type VZOA 20 RC 130/16
1 Piece	Order No. 96026	Modification with EC custody transfer

Example for meter without modification:

Application:		Measurement of Diesel fuel on testing facility, flow rate 200...400 l/h, temperature 20...50 °C
1 Piece	Order No. 92333	CONTOIL®, fuel oil meter, type VZEA 20 RC 130/16

Meter data (annex)

Function

CONTOIL® flow meters work on the volumetric principle of rotary piston meters (positive displacement meters).
The main features of this measuring principle are large measuring ranges, high accuracy, suitability for high viscosities and independence from power supply; flow disturbances do not influence proper operation.

Construction

Rotary piston, guide roller and driver are the only moving parts in contact with the liquid. As the hydraulic part is completely separated from the roller counter, the movement of the rotary piston is transmitted by a magnetic coupling through the sealing plate.

VZO 4 and VZO 8

Inlet and outlet connections are to be made perpendicular to the bottom plate of the meter.
OEM versions with connections located at the sides.

VZE/VZO/VZEA and VZOA 15 … 50

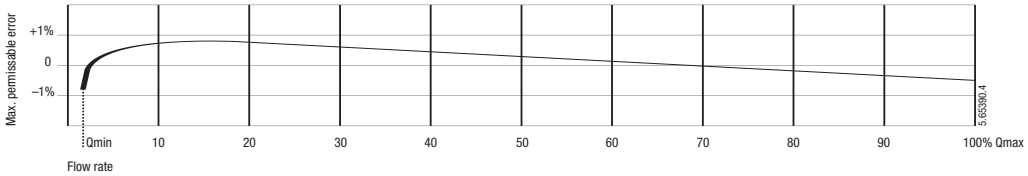
These meters are equipped with counters, which are rotatable through almost 360° for easy reading (exception: versions with Reed pulser RV).

Accuracy Limits: Reference Conditions

Accuracy limits according to technical data of meter in % of actual value for the whole measuring range.

Reference conditions

Liquid: Calibration oil similar to heating fuel extra light, density at 20° C = 814 kg/m^3
Viscosity = 5,0 mm^2/s selon DIN 51757 / ISO 3104 (corresponds to 4,1 mPa.s)
Temperature: 18 … 25° C
Horizontal mounting, readings on register.
CONTOIL® Oil meters are never to be tested with water, otherwise they would get damaged.



Pressure drop curves

Viscosity information

Kinematic viscosity	Stokes, Centi-Stokes, mm^2/s	St, cSt, mm^2/s
Dynamic viscosity	Pascal seconds, millipascal seconds	Pas, mPa.s
	Poise, Centipoise (outmoded)	P, cP
Conversion	cSt × density = mPa.s	
	Engler degrees °E to mPa.s: only using comparative table	
	Saybold units to mPa.s: only using comparative table	
	Redwood units to mPa.s: only using comparative table	
Rule of thumb	1 cSt → 1 mm^2/s → 1 mPa.s

Data for burner and engine power

Burner

Burner			Fuel oil meter	
Power	Flow rate heating fuel EL		Flow rate	Dimension
up to kW	kg/h	l/h	Qmin...Qn l/h	DN
500	42	50	1... 50	4
1 300	113	135	4 ... 135	8
4 000	336	400	10 ... 400	15
10 000	840	1 000	30 ... 1 000	20
20 000	1 680	2 000	75 ... 2 000	25
60 000	5 040	6 000	225 ... 6 000	40
200 000	16 800	20 000	750 ... 20 000	50

Formula for consumption in litres/hour:

$$\frac{\text{Burner power in kW}}{\text{Energy value of fuel in kWh/kg } \chi \text{ density in kg/dm}^3}$$

Example:

$$\frac{600 \text{ kW}}{11{,}8 \text{ kWh/kg } \chi \text{ } 0{,}82 \text{ kg/dm}^3} = 62 \text{ l/h}$$

Engines

Engine			Fuel oil meter [1]	
Power up to ...		Diesel fuel consumption	Flow rate	Dimension
approx. HP	approx. kW	l/h	Qmin...Qn l/h	DN
250	184	50	1... 50	4
680	500	135	4 ... 135	8
2 000	1 470	400	10 ... 400	15
5 000	3 680	1 000	30 ... 1 000	20
10 000	7 360	2 000	75 ... 2 000	25
30 000	22 000	6 000	225 ... 6 000	40
100 000	73 600	20 000	750 ... 20 000	50

1) For differential measurement the flow meter has to be selected according to the pump flow rate and the flow in the return pipe. Consider chapter 9!

Formula:

1 HP = 0,736 kW
1 kW = 1,36 HP

1 kg Diesel at 0,84 kg/dm3 = 1,19 l

Rule of thumb:

approx. 190 g/kWh correspond to 0,226 l/kWh
approx. 140 g/HP and hour correspond to 0,167 l/HP/h

How to obtain an optional measurement

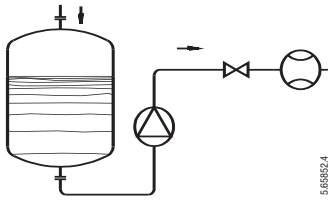
Planning

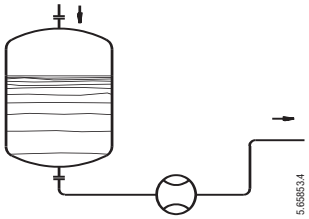
Flow meters are precision measuring instruments. They achieve optimal results if

- a few important rules are observed during plant design,
- mounting and commissioning are carried out with care,
- the meters are used for their defined purpose only.

Layout of Pipework

- The quantities consumed by all the users must be registered by the meter.
- Rotary piston meters can be mounted without straight stabilisation pipes (after bends, T-pieces or fittings) in horizontal, vertical or inclined position. Do not mount the meter with the head pointing downwards.
- The layout of piping must ensure that the meter is at all times filled with liquid and that no inclusion of air or gas may occur.
- Easy access for reading the meter and controlling the ancillary equipment is essential.





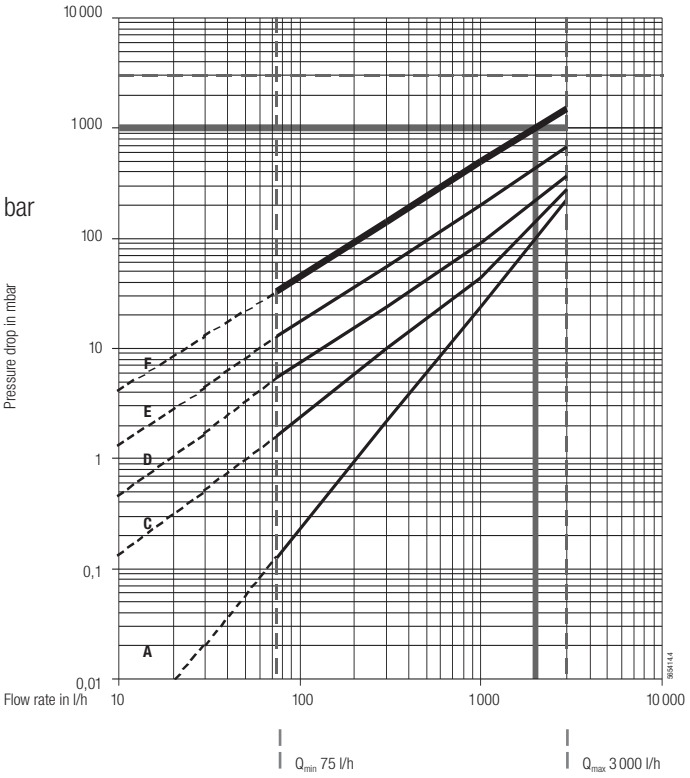
Selection of the Meter and Ancillaries

To be considered when selecting the meter:

- Operating temperature
- Viscosity of the medium
- Operating pressure
- Flow rate
- Resistance of the material against liquid to be metered and working conditions

The technical data are valid for the following reference condition: EL heating fuel / diesel at 20° C. For higher viscosity's or if the meter is mounted on the suction side, it is necessary to determine the pressure drop and the flow rate that can still be attained by using the pressure loss curves (Chapter 5). If the pressure drop is more than 1 bar, you are advised to use the next higher nominal meter width. Maximum permissible pressure drop = 3 bar.

Example 1:



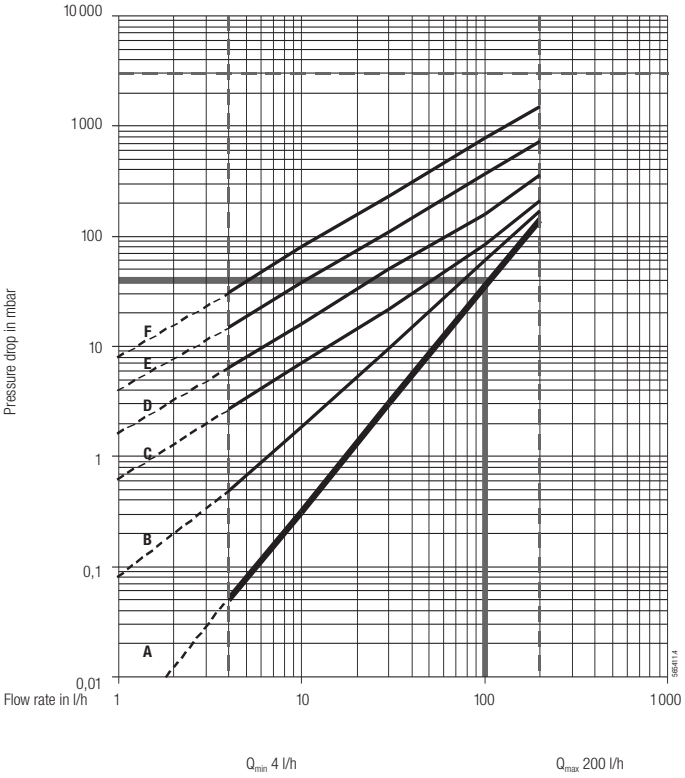
Medium Mineral oil, Viscosity 450 mPa.s
Mounting VZE 25 on pressure side

1. Viscosity line
E = 200 mPa.s
F = 500 mPa.s

2. Supposition for max. permissible pressure drop = 1

3. From the intersection of line F and pressure drop 1 bar downwards, the possible flow rate of 2000 l/h is obtained.

Example 2:



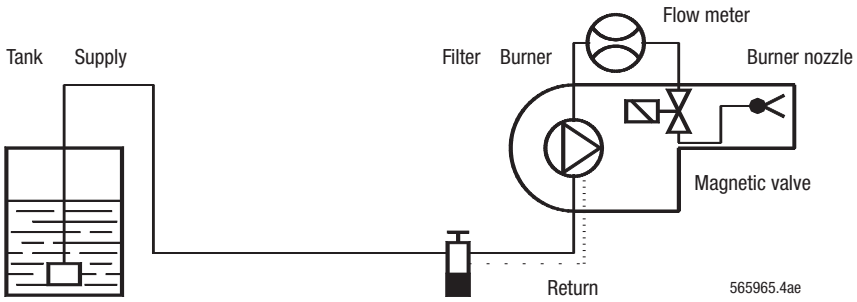
Medium Heating fuel extra light
Mounting VZO 8 on suction side

1. Viscosity line
A = 5 mPa.s
B = 25 mPa.s
C = 50 mPa.s

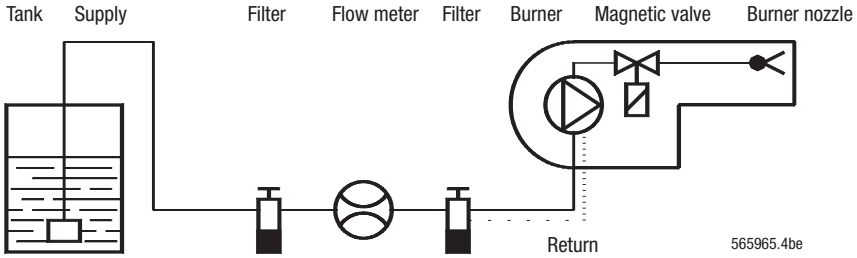
2. Supposition for max. permissible pressure drop = 40 mbar

3. From the intersection of line A and pressure drop 40 mbar downwards, the possible flow rate of 100 l/h is obtained.

Mounting on pressure side (burners)



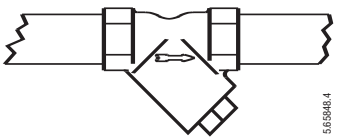
Mounting on Suction side (burners)



Impurities in plant or liquid

Should impurities occur in the plant or in the liquid, a strainer (dirt trap) has to be installed before the meter. The filter mounted in the meter inlet is only a safety filter and is too small to act as a strainer.

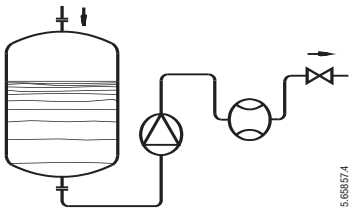
Maximum mesh width for strainers/dirt traps



Meter size	Meter type		
	VZE	VZO	VZEA / VZOA
DN 4	–	0,080 mm	0,080 mm
DN 8	–	0,100 mm	0,100 mm
DN 15	0,250 mm	0,250 mm	0,100 mm
DN 20	0,400 mm	0,400 mm	0,100 mm
DN 25	0,400 mm	0,400 mm	0,250 mm
DN 40	0,600 mm	0,600 mm	0,250 mm
DN 50	0,600 mm	0,600 mm	0,250 mm

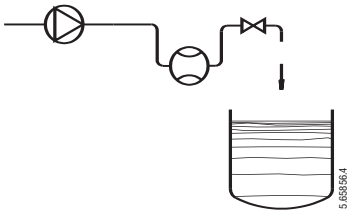
Shut-off Devices

In order to avoid backflows and drainings, shut-off devices have to be mounted after the meter. Backflows and drainings cause measuring errors and can damage the meter.



Filling/Dosing

For filling and dosing the valve has to be mounted between meter an discharge. The shorter the pipe section between meter and discharge, the higher the accuracy. Fast opening and shutting of the valve should be avoided (pressure hammer!).



Remote Processing/Ancillaries

Any backflow must be avoided on meters equipped with pulsers for remote processing. If this cannot be achieved by appropriate plant design, a non-return valve should be fitted.

Electrical lines and installations

Electrical lines and installations are subject to statutory regulations which must be taken into account when planning the system. For installations in zones subject to explosion hazards, please consult an expert.

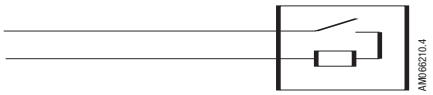
The following factors should be taken into account during plant design:

- ancillaries connected after the meter
- environmental disturbances
- maximum cable lengths with or without amplifier
- connection boxes, cable guides

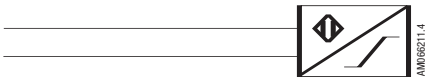
Pulsers

Power supply

Our range of products includes passive pulsers for the remote processing of flow data. The pulser generates one pulse unit of volume and is to be supplied with power from the pulse processing device.



Power supply 5 … 48 V AC/DC



Power supply 5 … 15 V DC

Selection of the appropriate pulser

The selection of the most appropriate pulser and pulse value depends on the application. As a rule, remote totalisation demands rather large pulse values, whereas analogue signals, dosing control or indication of actual flow tend to need small values. Battery supplied devices can only be used together with Reed pulsers.

Selection of the processing device

The pulse length depends on the flow rate. Continuous contact may occur at zero flow. The device connected must therefore be able to accept continuous load; otherwise, protective measures have to be taken. For remote totalisation, you are recommended to use an electronic pulse counter with a low power consumption and bounce filter.

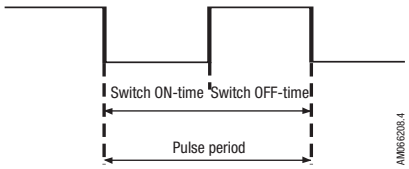
Correct pulse processing

Interrupted flow may cause hydraulic oscillation of the liquid in certain plants (hydraulic vibration with minimal flow backward/forward). The pulses which can occur in such cases may be interpreted as forward flow by the connected device. Such faulty pulses do not affect the indication of the actual value since they can only occur at almost zero flow. However, if the pulser controls a counting device, hydraulic vibration must be avoided by an appropriate modification or layout of the plant.

Pulse values

Pulse values depend on type and nominal diameter of the meter. They are listed in the technical information of the meter concerned.

Pulse period



Pulse period as well as on- and off-times can be calculated with the following formula:

$$\text{Pulse period in s} = \frac{\text{pulse value in litres} \times 3600}{\text{flow Q in l/h}}$$

$$\text{On-time} = \frac{\text{pulse period in s x on-time in \% of pulse period}}{100}$$

$$\text{Off-time} = \text{pulse period in s minus on-time}$$

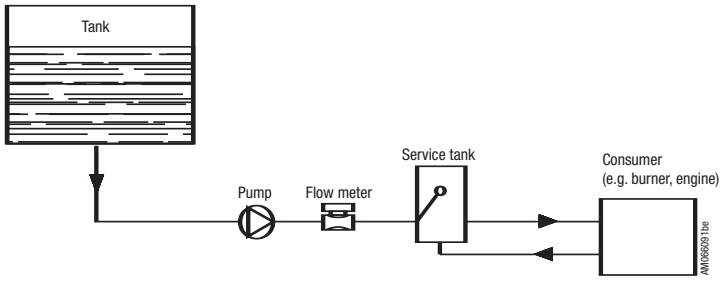
We recommend that this calculation is carried out for the min. and max. expected flow rates.

Application examples

Diesel engine

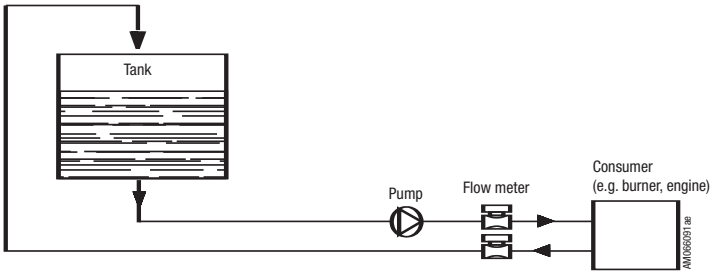
Direct consumption measurement

In place of the fuel feedback, an intermediate container with a heat exchanger is installed in the tank on the system side. The flow measurement is taken in the supply pipe to the intermediate tank. The load on the meter and the measuring result correspond precisely to the consumption.



Differential measurement

For a differential measurement, the pipe routing is kept unchanged, with circulation back into the tank. A flowmeter is installed in both the pipes. The consumption is determined as the difference between the amount in the supply section and the amount in the return section. The meter loads therefore correspond to the supply and return flow rates.



Reason to use meters with special pairing

Standard meters feature a large measuring range and a max. permissible error of ±1%. This makes them unsuitable for differential measurements, as the following example shows:

Full load

Supply	400 l/h	Error ±1%	= nominal ±4,0 l
Return	150 l/h	Error ±1%	= nominal ±1,5 l
Consumed	250 l/h	Measuring error	nominal ±5,5 l

Maximum measuring error
Consumed = 5,5 × 100 : 250 = ±2,2 %

Min. load

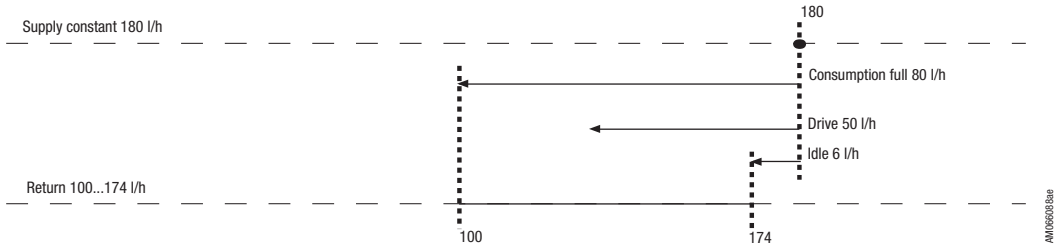
Supply	400 l/h	Error ±1%	= nominal ±4,0 l
Return	360 l/h	Error ±1%	= nominal ±3,6 l
Consumed	40 l/h	Measuring error	nominal ±7,6 l

Maximum measuring error
Consumed = 7,6 × 100 : 40 = ±19 %

For an optimal result, special meters are therefore used for differential measurements. These are precisely co-ordinated to the operating conditions and are calibrated in pairs. This means that the measurement variance can be significantly reduced (for example: supply, at constant flow, to ±0.1%; return, with slightly variable flow, to ±0.3%).

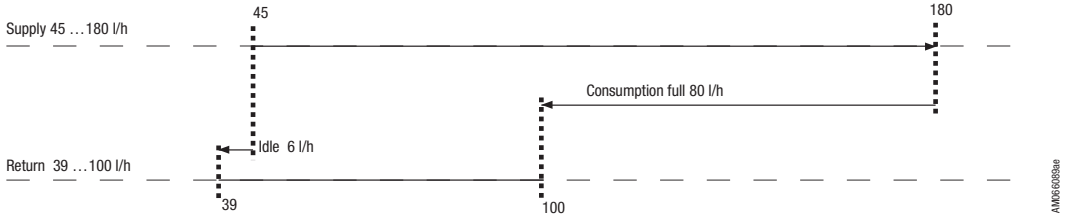
Loads on meters

Example: Engine power 500 hp, vehicle with electric pump



Effective loads on meters	Supply	constant 180 l/h
	Return	100 … 174 l/h

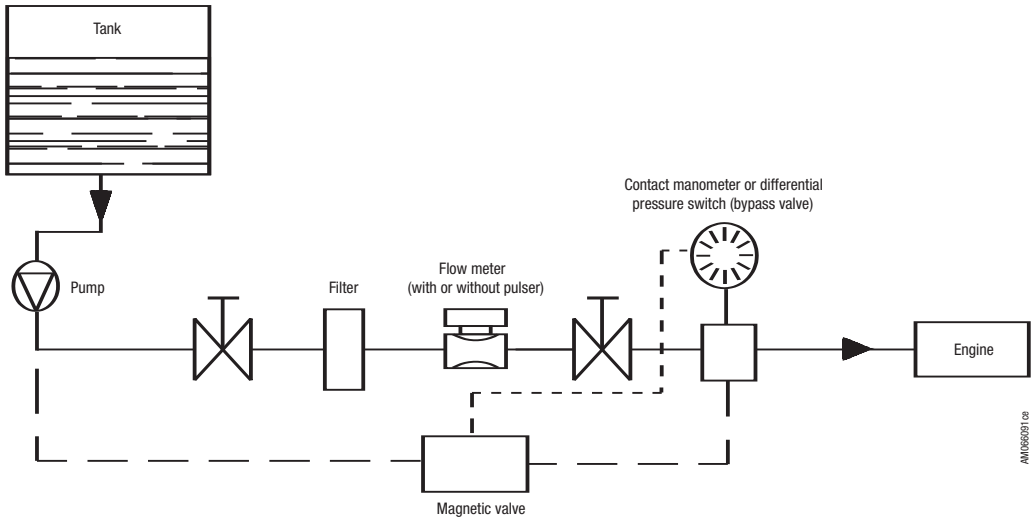
Example: Engine power 500 hp, vehicle with RPM dependent pump 1:4



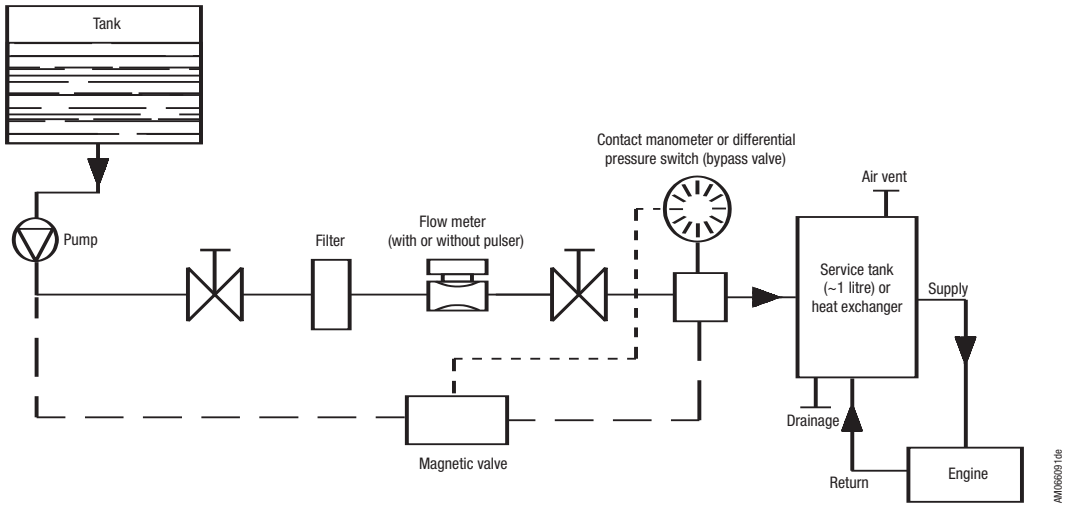
Effective loads on meters	Supply	45 … 180 l/h
	Return	39 … 100 l/h

Consumption measurement on board ships

On board ships, care is usually taken to ensure that the engine can still be operated at full power even if the filter is heavily contaminated or if the meter is damaged. When switching over to the bypass, attention may be drawn to the necessary maintenance via an alarm output, and the engine can be temporarily operated without measuring the consumption.



The magnetic valve opens as soon as the pressure drops below a defined level.



Float or valve control in service tank required. Formation of gas is to be avoided. The magnetic valve opens as soon as the pressure drops below a defined level. For measuring the consumption of more than one engine, each will require a separate installation similar to the one above.
